

The background of the advertisement shows several medical professionals in a clinical setting. They are wearing white full-body protective suits, blue gloves, and white hairnets. They are focused on a patient lying on a table. The scene is brightly lit, and the overall atmosphere is professional and sterile.

**Inspired
by your comfort,
driven by innovation.**

Bekina® Boots specialise in the development, production and marketing of work boots, made with NEOTANE® Technology. Our niche markets demand **quality, durable, safe and comfortable products** with an excellent price-quality ratio.

Bekina® Boots made with NEOTANE® Technology are made with the highest quality craftsmanship. Likewise the wearers of our boots stand for professional craftsmanship, always ready

to give it their all every day, in the most extreme and diverse working conditions. They work long hours subjecting the boots to excessive usage day in and out.

Established in 1962, Bekina® Boots have gained **over 55 years of experience and have now grown into an international player**. This has taught us to constantly stay on top of the latest trends, evolutions and a constantly growing market.

safety work boots

for the food industry

a unique blend

of ingredients

and its innovative processing

NEOTANE[®]
TECHNOLOGY

NEOTANE® Technology is the combination of a unique blend of materials and the innovative way of processing it. The high performing NEOTANE® material has been developed based on over 55 years of experience and the feedback from millions of end users. For decades we have been working together with the best equipment suppliers guaranteeing us high quality products made with NEOTANE® Technology.

Our unique blend of ingredients leads to outstanding product features. Bekina® Boots made with NEOTANE® Technology are light, insulating, comfortable and strong. They provide excellent protection against dirt and have an optimal chemical resistance. Today, we have a full range of NEOTANE® products. Depending on the sector you operate in, our R&D specialists developed a custom NEOTANE® recipe with the needs and requirements of your industry in mind, thus meeting the needs of its users.

strong & impermeable

Bekina® Boots are designed for long and intensive use. That is why the outer layer of Bekina® Boots is strong and impermeable. During the curing process of the boots after production, a natural skin is formed which protects the cell structure against dirt and penetration of various types of chemicals. The outer surface can be easily wiped clean after a hard day's work. So don't be afraid to get yourself dirty.

NEOTANE®

TECHNOLOGY

tiny air bubbles light & insulating

NEOTANE® consists of millions of tiny air bubbles, compactly mixed through the material. This makes Bekina® Boots light and flexible. The boot moves with you and pushes you forward. Apart from that, air is the perfect insulator. Consequently our boots keep your feet warm in the cold and provide for the necessary cooling in the heat.

self-regulating thermal process

This ingenious process is the result of the combination of the air bubble structure and a protective vapour control layer on the inside of the boot. This vapour control layer guarantees an increasing thermal performance and helps you to protect your feet from the consequences of condensation.

The combination of the lining, the NEOTANE® and the moisture-absorbing insoles creates a self-regulating thermal process. That is how you can avoid sweaty feet, enjoy more benefits and more comfort.

THE NEOTANE® EXPERIENCE

You have to feel it to believe it. Put on the boots and go for it! You will immediately experience their comfort.

in house testing & development

Our technical product team ensures that our safety boots undergo continuous quality control. Bekina® Boots have their own state-of-the-art test lab. This enables us to carry out our own tests in accordance with all international standards. The team also performs chemical testings on boots on customer demand.

tested and approved by professionals

Bekina® Boots are constantly looking for the ultimate comfort and for practical innovations to optimise your safety. Whenever we introduce a new boot for the food industry, we first have it tested by a large number of employees in our test factories. Their feedback on the design, fit, comfort level and safety is essential to the subsequent production process.

worldwide renowned test institutes

Bekina® Boots work together with worldwide renowned test institutes. Consequently we can export our products worldwide guaranteeing safety when wearing our boots in the most extreme working conditions.

food processing

the right balance

between

comfort,

hygiene, safety &

saving money

**safety
first**

15% of accidents in the workplace are caused by a lack of slip-resistant footwear. All of the food processing boots from Bekina® Boots are **SRC approved** and in practice provide a better grip on the most common types of surfaces. So employers and staff can keep both feet firmly on the ground and avoid accidents in the workplace!

Hygiene: easy to disinfect

Less accidents: increased slip resistance, better grip

COMFORT: LIGHTWEIGHT

Our boots made with NEOTANE® Technology are significantly lighter than boots made of other materials. The weight of boots has a direct impact on the comfort one experiences whilst wearing. Standing a significant part of the working day, food industry workers can experience an intense feeling of fatigue in the lower back and legs at the end of the day. In the long term this is negatively influencing their productivity. It is proven that food workers with lightweight safety boots are experiencing significantly less fatigue.

value for money

Bekina® Boots last longer than traditional materials thanks to the excellent quality of NEOTANE®. Consequently, wearing Bekina® Boots saves you money and has a positive impact on waste management.

increase the wellbeing of your staff

Whether you are standing at a fixed work station or conducting strenuous physical work, your legs and joints suffer extra strain. Thanks to Bekina® Boots, your staff will be **walking on air**. Expensive and impractical anti-fatigue mats are a thing of the past thanks to our boots' built-in comfort.

hygiene: avoid contamination

With **efficient colour-coding** you can prevent cross-contamination between different production units by choosing boots in different colours and thus defining different working areas.

METAL DETECTORS

Metal detectors can be installed in various stages of the food production process. When detecting metallic contamination of food products they prevent metal particles from causing serious injury to consumers. On the other hand, these small metal pieces can cause serious damage to machinery as well. Our safety boots with non-metallic toe cap will never interfere with the metal detectors.

“I work in a fish processing factory. I tried all kinds of boots. Bekina® Boots are the best I have had : really light, kept me warm throughout the day, very comfy, and they have lasted ages.”
